# SMITH'S COMPUTER

(Formerly "Eby's Handy Tables.")

SF 240  
557  
1919

The first edition of "Eby's Handy Tables" was published in 1906 and three succeeding editions were published. Each edition was enlarged and improved to meet suggestions of users.

In 1913 the name was changed to "Smith's Computers" and five editions were published as follows: "Creamery and Produce Edition"; "Lumber and Grain Edition"; "Mercantile Edition"; "Special Mercantile Edition" and "Farmer Edition." Substantially the same tables were found in all editions but differently arranged to meet the needs of each class of users.

There was found to be no material advantage to this plan and it was decided to combine all of the tables into one edition known as "Smith's Computer" which is suitable for any one of the lines of business for which any of the former editions were made. This saved confusion and simplified the advertising.

"Smith's Computer" is too well known at this time to the business men of the United States and many other countries to need any introduction here. It is now recognized by the commercial world as one of the great time and labor-saving devices which are being used so generally in every office, factory and mercantile business. For Creameries, Milk Condensaries and all allied interests "Smith's Computer" has proved to be indispensable. It saves the time of one or more clerks and insures accuracy and speed that can not be attained by any other device. It is now used as a text book in almost every State Experiment Station or Agricultural College. It is used extensively by the U. S. Government in its field work of the Dairy Department. It is also used generally in the pay roll departments of many of the largest manufacturers in the country.

Its tables are applicable to any line of work where multiplication of numbers are required. In fact the scope of its use is almost unlimited.

My offer in all former editions to give a free copy of the Computer to any person who found an error of more than 2 cents in any table still holds good in the new edition. Every error reported up to the time of printing the latest edition was corrected in the plates and now the tables are almost perfect. This offer is good only to the first one to report the errors.

The Computer is sold on a positive guarantee to give satisfaction or money refunded in five days if the book is returned in that time in good condition.

The new edition was published in July 1919, and is now standard in all parts of the country. The office and business has been located in Kansas City where every advantage for publishing and distributing is afforded. The book will be sent to any address any where in the world on receipt of the price, \$3.00.

# Publisher's Announcement

In May, 1915, the first edition of "Smith's Butterfat Computer" was published to meet the demands of buyers of cream, milk, butter, eggs and poultry. It soon met with a hearty reception by thousands of men who had been looking for just such a set of tables. In almost every small town in the United States there are from one to several buyers of cream and milk for the central creameries. As soon as these agents learned of the Computer they at once ordered. Many of the large central creameries purchased the books by the hundred to be furnished to their agents.

Hundreds of letters have been received commending the book for its handy arrangement, its large clear type and its accuracy and easy application.

These tables have been used in almost every kind of business where multiplications were made, including pay roll departments of large factories. They are especially useful where employees are paid by the hour or piece.

My former offer was to send a free copy to any person finding an error in the tables. The same offer is made relative to this edition, if the error amounts to 1 cent in the result.

The unusually high price now paid for butterfat has made the demand for a larger book with the tables running to 99 with the half fractions running on every page. This demand has been fully met with this edition.

The cost of this edition is more than double that of the former editions. It is also larger, better bound in every way and a much better book. The price of the book has been increased from \$1.50 to \$2.00. With the increased cost in all lines of printed books and blanks this small additional cost will not be objectionable.

Since publishing the former edition I have moved my home and publishing business to Kansas City, Mo., U. S. A., where the facilities for distributing are much better than at Pleasanton, Kans., my former home.

Thanking my thousands of friends for their generous endorsements of my Computers and hoping this new edition will meet all of the demands of the present high prices of all commodities where it is applied,

I am very respectfully,

J. FRANK SMITH, Publisher.

Kansas City, Mo., U. S. A.

## HOW TO APPLY THE TABLES.

The success of the tables in this computer depends on the operator, and to get quick results, one should know how to apply them to the best advantage. The tables are simple and easy to understand and are capable of a wide range of application. Here are a few rules and suggestions that will enable one not familiar with them to apply the tables.

### TO FIND BUTTERFAT IN CREAM.

The tables have a wide range for tests of cream, including all tests from 5 per cent to 99 per cent with the half fraction in each table. To find the fat in any lot of cream, use the table representing the test and run to the number representing the number of pounds and the number opposite is the pounds of fat. Example: 25 lbs. cream test 27 per cent. Use the 27 table and run to 25 and you have 6.75 lbs. fat.

### TO FIND FAT IN WHOLE MILK.

The tables include the tests of whole milk from 1.5 per cent to 9.9 per cent with all the tenths. To get the fat in any lot of milk, use the table representing the test and run to the number of pounds. Example: 76 lbs. milk test 3.4 per cent. Use the 34 table and run to 76 and you have 25.84, but since the test is 3.4 per cent in place of 34 per cent the decimal should be moved one place to the left and it leaves 2.58 lbs. fat.

### TO FIND VALUE OF FAT AT ANY PRICE.

The tables may be transposed any way and the correct results obtained. Example: 34 lbs. fat at 25 cts. per lb. Use the 34 table and run to 25, or use the 25 table and run to 34. Another example, 34 1-2 lbs. fat at 25 cts. per lb. Use the 34 1-2 table and run to 25. Example: 34 lbs. fat at 25 1-2 cts. per lb. Use the 25 1-2 table and run to 34. Example: 9.8 lbs. fat at 25 cts. per lb. Use the 25 table and run to 98 and move the decimal one place to the left. Example: 45.8 lbs. fat at 25 1-2 cts. per lb. Use the 25 1-2 table and run to 45 and you have the value of the 45 lbs. Then run to 8 and move the decimal one place to the left and add to value of 45 lbs.

### TO FIND VALUE OF BUTTER.

Apply the tables the same as butterfat.

## TO FIND FAT IN MORE THAN 100 LBS. OF CREAM OR MILK.

Since the tables only run to 100 it is well to know how to compute the fat in more than 100 lbs. of cream or milk. To compute the fat in 450 pounds of cream or milk use the table representing the test and run to 45 and to the result add one cipher and move decimal one place to right. To compute fat in 567 lbs. milk or fat, use table giving test and run to 5 and add two ciphers and move decimal two places to right. Then compute 67 and add. If it is 6578 lbs. milk test 4.5 per cent. First use the 45 table and run to 65 and move the decimal one place to right. Then run to 78 and move the decimal one place to left and add the two. By carefully studying this system and learning to shift the decimal point correctly one can compute cream and milk up to several thousand pounds with only one addition.

## TO FIND VALUE OF EGGS.

Use the table representing the price of eggs and run to the number representing the number of dozen. The result will be the value. If you have parts of a dozen it is necessary to learn the decimal to represent the odd number of eggs to get the exact value. Here is a table that will enable one to compute value of eggs in broken lots: 1, (1-12 doz.) equals .08; 2, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3 doz.) equals .33; 5, (5-12 doz.) equals .42; 6, (1-2 doz.) equals .50; 7, (7-12 doz.) equals .58; 8, (2-3 doz.) equals .67; 9, (3-4 doz.) equals .75; 10, (5-6 doz.) equals .83; 11, (11-12 doz.) equals .92. Example: 13 doz. and 7 eggs at 23 cts. per doz. Use the 23 table and run to 13 and you have \$2.99 and to get the value of 7 eggs run to 58 and you have 13 cts. This is easy and correct and when once used will be very handy.

## TO FIND VALUE OF POULTRY.

Apply the tables the same as in finding value of butter or butterfat.

## FOR WAGE TABLES.

When factories, etc., pay employees by the hour or the piece the tables can be used successfully. Example: 43 hours at 47 1-2 cts. per hour. Turn to 47 1-2 table and run down first column to 43 and you have \$20.425. Example: 47 1-2 hours at 43 cts. per hour. Use the same tables in same way. Example: 47 1-2 hours at 43 1-2 cts. (.435 cts.) per hour. Use 47 1-2 table and run to 43 and you have \$20.425. Then on same table run to 5 and you have 2,375; but the 5 is only .5 so you shift the decimal one place to left and have \$.2375; then add this to the first amount and you have \$20.662. This may seem a little slow at first but after a little practice it will be very easy. If paying by the piece the tables will compute any number to 100 and at any price per piece or dozen by half cent up to 99 1-2.

## HOW TO FIND FRACTIONAL PARTS.

If it is desired to find fractional values in any table, an easy plan is used thus: 49 3-4 pounds butterfat at 48 1-2 cts. per pound: Turn to 48 1-2 page or table and run to 49 and you have \$23.52. To find the value of 3-4 pounds just consider it .75 pound and run to 75 in the 48 1-2 table and you have 36.375, but by moving the decimal to its proper place you have 36 cents. \$23.52 plus 36 cts. equal \$23.88, value of 49 3-4 lbs. fat at 48 1-2 cts. If the fractional part is 1-4 use 25 in the table as it will represent .25. If you have 1-2 pound, use .50 to represent .5.

## TO FIND DECIMAL PARTS.

If you have 49.8 pounds of fat at 48 1-2 cts. per pound, you can easily find the value of the .8 pound by noting the number opposite the number 8 in the 48 1-2 table and moving the decimal. Example: 49.8 pounds fat, price 48 1-2 cts. pound. Use 48 1-2 table and find 49 and you have \$23.765. Then by referring to 8 you have 3.88, but the decimal should be moved one place to the left, making \$.388. Then add this to \$23.765 and you have \$24.153. This same rule will find the value of any decimal part of a pound on any page in the book.

## EACH TABLE MAY REPRESENT SEVERAL NUMBERS.

Each table in the computer can be used to represent five or more numbers very easily. Example: 22 1-2 table can represent milk test of 2.25 per cent or cream test 22 1-2 per cent or value of butter or butterfat at 22 1-2 cts. per lb., or any articles at \$2.25 each or per pound, and also \$22.50 per each or dozen or any other way. The varied number of uses to which the tables may be applied depends on the operator and his ability to shift the decimal point. With a little study there is hardly any limit to their application.

If a user of the computer has any difficulty in applying the tables, after reading the instructions, he is invited to write to the publisher, telling his troubles and enclosing a few examples. A reply will follow at once and a special effort made to explain the particular application of the table.

49-2.94	99-5.94	49-3.185	99-6.435
50-3.00	100-6.00	50-3.25	100-6.50

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

50-4.00	100-8.00	50-4.25	100-8.50

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

50-6.00	100-12.00	50-6.25	100-12.50

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .68 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (3-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .03 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

To find butterfat in cream or whole milk: See notes and examples on pages 3 and 4.

To find butterfat in more than 100 lbs. of cream or milk: See notes and examples on pages 3 and 4.

To find value of butter or butterfat or poultry or eggs: See notes and examples on pages 3 and 4.

Each table in this computer can represent five or more numbers. See notes on pages 3 and 4.

50-15.00	100-30.00		50-15.25	100-30.50	

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .03 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .32; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .03 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3 doz.) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3 doz.) equals .33; 5, (5-12 doz.) equals .42; 6, (1-2 doz.) equals .50; 7, (7-12 doz.) equals .58; 8, (2-3 doz.) equals .67; 9, (3-4 doz.) equals .75; 10, (5-6 doz.) equals .83; 11, (11-12 doz.) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.

Here is a rule to compute value of less than dozen eggs at any price. 1 egg, (1-12 doz.) equals .08 of a dozen; 2 eggs, (1-6 doz.) equals .17; 3, (1-4 doz.) equals .25; 4, (1-3) equals .33; 5, (5-12) equals .42; 6, (1-2) equals .50; 7, (7-12) equals .58; 8, (2-3) equals .67; 9, (3-4) equals .75; 10, (5-6) equals .83; 11, (11-12) equals .92. Under the table representing the price per dozen of eggs, use these numbers as decimals and you will always get correct value of odd eggs.
